Welcome!

Dynamic Software Engineering B.S. graduate (3.6/4.0 GPA) with specialized expertise in AI-driven solutions, full-stack development, and mobile applications. Proficient in Python, TensorFlow, and React Native, I've built impactful projects like an AI-powered farming assistant that enhanced crop yield predictions by 15% for Pakistani farmers. As a Level One Fiverr Seller, I delivered 8+ custom AI and web solutions, earning a 4.8/5 client rating. With hands-on experience in deep learning, computer vision, and REST API integration, I thrive in collaborative environments and am eager to drive innovation as an AI Engineer/Intern under expert mentorship.

Profile Summary

- **Strong Academic Background:** Graduated with distinction, equipped with a solid grounding in algorithms, software design and full-stack development.
- **Hands-on Project Experience:** Completed multiple academic and personal projects involving web and mobile app development, APIs and databases.
- **Technical Toolbox:** Proficient in Python, Django, JavaScript, React, Next, React Native, and familiar with .NET Core WebApi.
- **Interest Areas:** Passionate about Web Development, AI development, Web design, UI/UX.
- **Soft Skills:** Adept at communication, problem-solving, time management, and teamwork—ready to thrive in fast-paced, collaborative.
- **Career Aspiration:** Seeking a role where I can contribute meaningfully to impactful projects, grow under mentorship, and evolve into a versatile software engineer.

Experience

Junior AI Developer SMB Digital Zone Present

- Developed and integrated AI solutions including Virtual Try-On (VTON), AI Makeup application, and outfit recommendation systems using Transformer-based models.
- Built backend systems for wallet management and an online store, enabling seamless integration of AI-driven try-on and recommendation features.
- Contributed to end-to-end AI pipelines: data preprocessing, model training, deployment, and production-level integration with web platforms.
- Collaborated with cross-functional teams to deliver scalable AI features enhancing customer engagement and user experience.

GAN's Intern ITSOLERA Summer 2024

- Developed a text-to-image synthesis model using a Stage GAN architecture to generate high-fidelity images from textual descriptions.
- Engineered the full-stack deployment pipeline, integrating the trained model into a production-ready web application using the Django framework.
- Executed data preprocessing and cleaning protocols for large-scale datasets, significantly improving model training efficiency and output quality.
- Collaborated in a team to optimize model performance, utilizing advanced GAN training techniques to enhance output accuracy and visual realism.

Projects

As a fresh graduate, I have worked on industrial projects for SMB DigitalZone. However, during my university studies, I developed several academic projects, including a mobile application built in React Native plus Django (python).

FarmBotics – AI-Based Farming Assistant System

Final Year Project

- Designed and implemented an AI-powered system to assist farmers in optimizing agricultural decisions based on soil analysis, weather forecasting, crop selection, and pest prediction.
- Integrated multiple modules including farm location detection, smart scheduling, and chatbot interaction to provide personalized recommendations.
- Aimed to enhance crop yield and promote smart farming practices in Pakistan.
- Tools Used: Python, Django, TensorFlow, React Native, Google Maps API

Technologies

Languages: C++, Python, Django, React, Next, C#, SQL, JavaScript, React Native

Technologies: .NET Core Web Api, SQL Workbench, Vs Code, Canva, Visual Studio, Android Studio, Github, Git.
